Mexicali CVR Analysis

Order Volume Comparison: 2025 vs 2026 | 3 SKUs

Source: [redacted] 08 12 26.xlsx | Prepared for: Sylvia Tan

Key Findings

• **27639-003 (analyzed separately):** total volume rose **+11.3%** (13,641,000 → 15,180,000). Growth is led by Q1 (Jan +15.8%, Feb +56.3%, Apr +125.5%) and a strong December (+80.3%). Monthly volatility (CV) improved from 79.6% to 59.4%.

• **63251-002 + 63252-002 (combined):** total volume fell **-14.9%** (3,344,400 → 2,847,000). Only Jan (+30%), Mar (+40%) and Nov (+233%, from a low base) grew; Apr, May, Jul and Oct declined 25–49%.

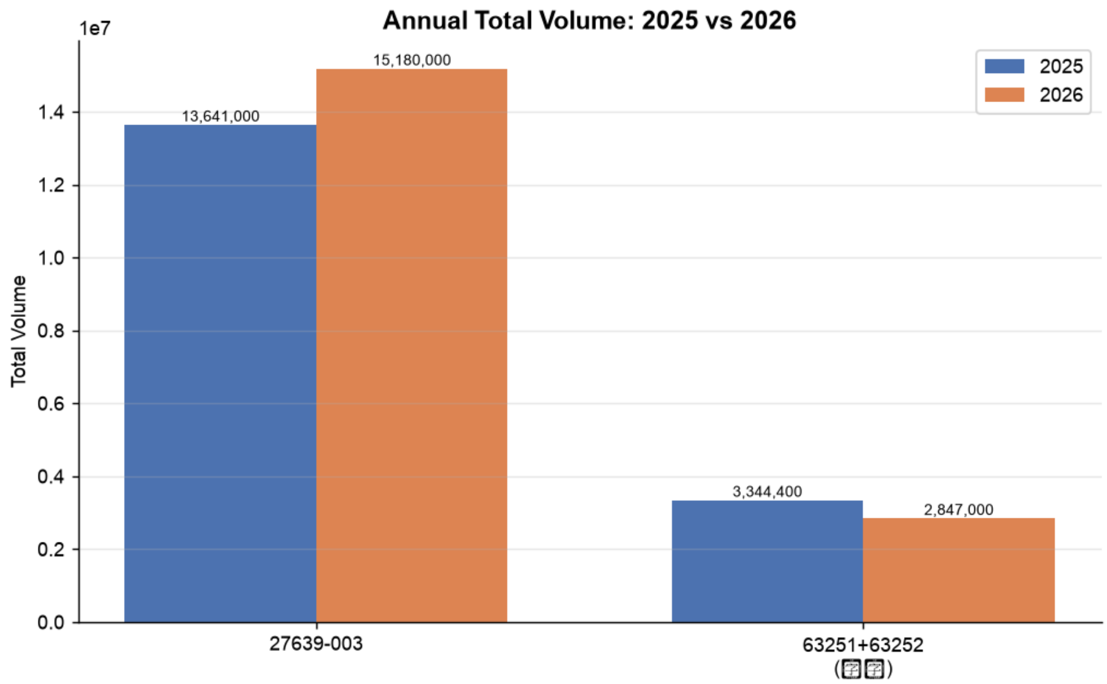
• **Data gap:** 63251-002 Sept 2026 is blank in the source file — excluded from sums and marked N/A.

• **Pattern:** 27639 is a high-volume, seasonally-peaked item (January peak both years, a blank March 2025 recovered in 2026); the two smaller SKUs show broad 2026 demand softening outside Q1.

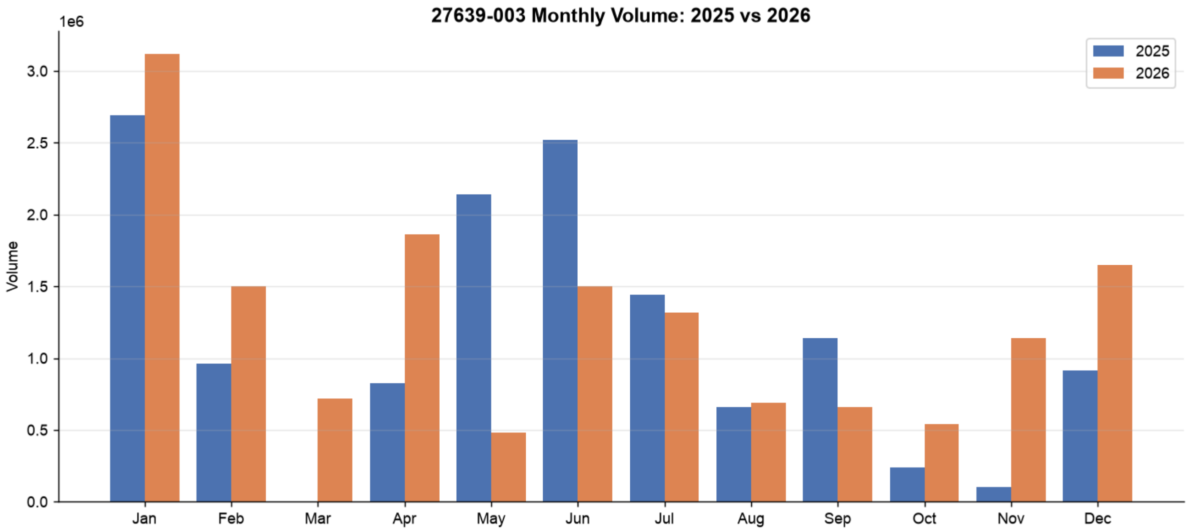
Summary Statistics

Part Number	2025	2026	Diff	YoY	CV25	CV26
27639-003	13,641,000	15,180,000	1,539,000	+11.3%	79.6%	59.4%
63251-002 + 63252-002 (Combined)	3,344,400	2,847,000	-497,400	-14.9%	48.2%	54.2%
63251-002	1,615,200	1,389,000	-226,200	-14.0%	48.1%	51.5%
63252-002	1,729,200	1,458,000	-271,200	-15.7%	48.4%	57.3%

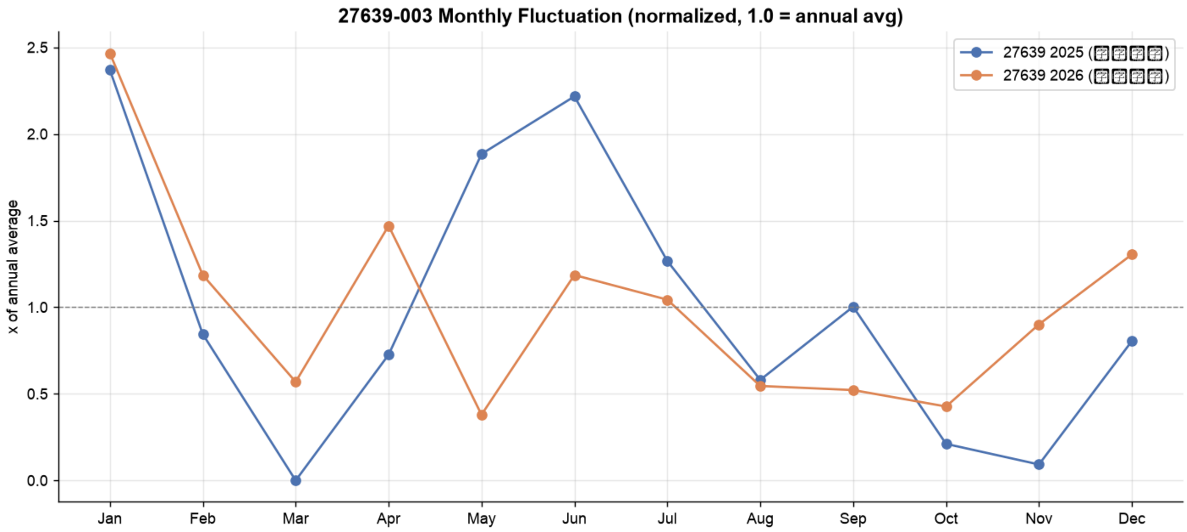
Annual Total Comparison



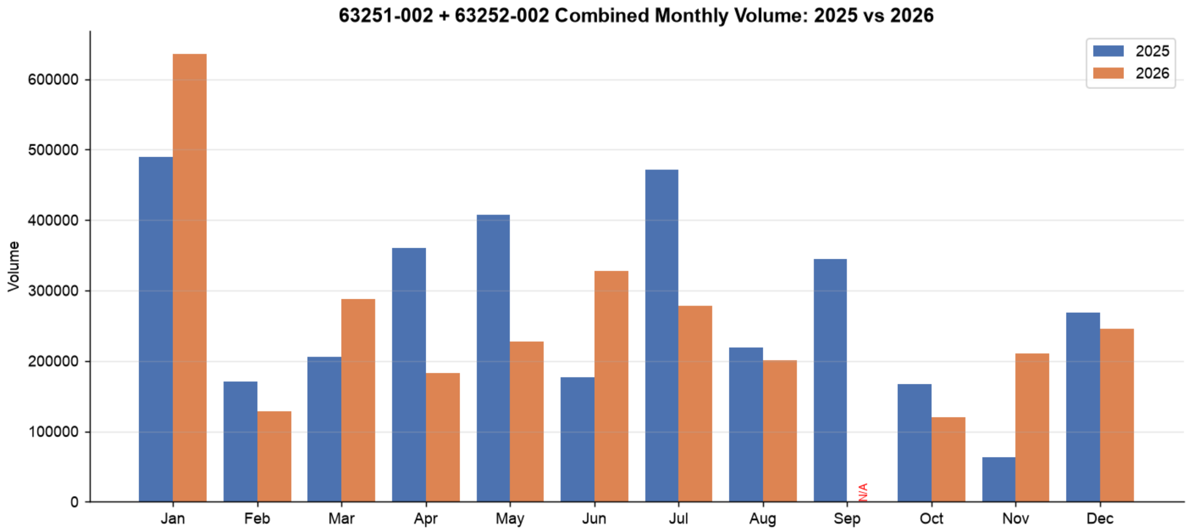
27639-003 — Monthly Volume (2025 vs 2026)



27639 monthly fluctuation (normalized to annual average): 2025 shows a sharp March gap (0 orders) and very high Jan/May/Jun peaks; 2026 is more evenly spread with a mid-year dip in May (2,142,000 → 480,000, -77.6%). CV dropped from 79.6% to 59.4%, i.e. 2026 is relatively more stable.



63251-002 + 63252-002 — Combined Monthly Volume (2025 vs 2026)



The two smaller SKUs contracted -14.9% in total. 2026 strength is concentrated in Q1 (Jan 489K→636K, Mar 205K→288K) and Nov (63K→210K); mid-year months are materially weaker (Apr -49%, May -44%, Jul -41%, Oct -28%). Sept 2026 for 63251 is missing (shown N/A); combined Sept 2026 = 63252 only (180,000). CV rose slightly from 48.2% to 54.2%.

Possible Reasons (data-driven observations)

• **Seasonality / build cycle:** 27639 peaks in January both years — consistent with an early-year demand or production build; the 2025 March blank suggests a one-off planning/data gap rather than a demand collapse (recovered in 2026).

• **Mid-year 2026 softness (27639):** May–Sep 2026 is below 2025 levels, implying a demand or scheduling shift in the 2026 mid-year — worth confirming against shipments/customer pulls.

• **Smaller SKU contraction:** broad 2026 declines across 63251/63252 outside Q1 point to overall demand softening, SKU substitution, or customer mix change for these parts.

• **Caveat:** root causes require business context (promotions, supply constraints, new programs). Figures above are derived solely from the supplied order-volume file.
